

**Coursera Capstone Project**

**COURSERA IBM APPLIED DATA SCIENCE CAPSTONE FINAL PROJECT**

**VASANTHA GEETHIKA YALLAPRAGADA**

## **REPORT CONTENT:-**

### Introduction Section :

- 1.1 Discussion of the "background situation" leading to the problem at hand:
- 1.2 Problem to be resolved
- 1.3 Audience for this project.

### Data Section:

- 2.1 Data of Current Situation (current residence place)
- 2.2 Data required to resolve the problem
- 2.3 Data sources and data manipulation

### Methodology section :

- 3.1 Process steps and strategy to resolve the problem
- 3.2 Data Science Methods, machine learning, mapping tools and exploratory data analysis.

### Results section:

Discussion of the results and how they help to take a decision.

### Discussion section :

Elaboration and discussion on any observations and/or recommendations for improvement.

### Conclusion section :

Decision taken and Report Conclusion.

## **Introduction Section:**

Discussion of the business problem and the audience who would be interested in this project.

### **1.1 Scenario and Background :-**

I decided to apply the learned skills during the Coursera course to explore ways to make sure my decision is factual and rewarding. Of course, there are alternatives to achieve the answer using available Google and Social media tools, but it rewarding doing it myself with learned tools.

### **1.2 Problem to be resolved :-**

The challenge to resolve is being able to find a rental apartment unit in Manhattan NY that offers similar characteristics and benefits to my current situation. Therefore, in order to set a basis for comparison, I want to find a rental unit subject to the following conditions:

1. Apartment with min 2 bedrooms with monthly rent not to exceed US\$7000/month
2. Unit located within walking distance ( $\leq 1.0$  mile, 1.6 km) from a subway metro station in Manhattan
3. Area with amenities and venues similar to the ones described for current location ( See item 2.1)

### **1.3 Interested Audience :-**

I believe this is a relevant project for a person or entity considering moving to a major city in Europe, US or Asia, since the approach and methodologies used here are applicable in all cases. The use of FourSquare data and mapping techniques combined with data analysis will help resolve the key questions arisen. Lastly, this project is a good practical case toward the development of Data Science skills.

## **Data Section :-**

### 2.1 Data of Current Situation:-

Foursquare to identify the venues around the area of residence n week 2 applied capstone . It serves as a reference for comparison with the desired future location in Manhattan NY

### 2.2 Data Required to resolve the problem :-

In order to make a good choice of a similar apartment in Manhattan NY, the following data is required: List/Information on neighbourhoods form Manhattan with their Geo data ( latitude and longitude. List/Information about the subway metro stations in Manhattan with Geo data. Listed apartments for rent in Manhattan area with descriptions ( how many beds, price, location, address) Venues and amenities in the Manhattan neighbourhoods (e.g. top 10) 2.3 sources and manipulation The list of Manhattan neighbourhoods is worked out during Lab exercise during the course. A CSV file was created which will be read in order to create a data frame and its mapping. The CSV file 'mh\_neigh\_data.csv' has the following below data structure. The file will be directly read to the Jupiter Notebook for convenience and space savings. The clustering of neighbourhoods and mapping will be shown however. An algorithm was used to determine the geo data .The actual algorithm coding may be shown in 'markdown' mode because it takes time to run.

## **Methodology section:**

This section represents the main component of the report where the data is gathered, prepared for analysis. The tools described are used here and the Notebook cells indicates the execution of steps.

### The analysis and the strategy:

The strategy is based on mapping the above described data in section 2.0, in order to facilitate the choice of at least two candidate places for rent. The choice is made based on the demands imposed.

The processing of these DATA and its mapping will allow to answer the key questions to make a decision:

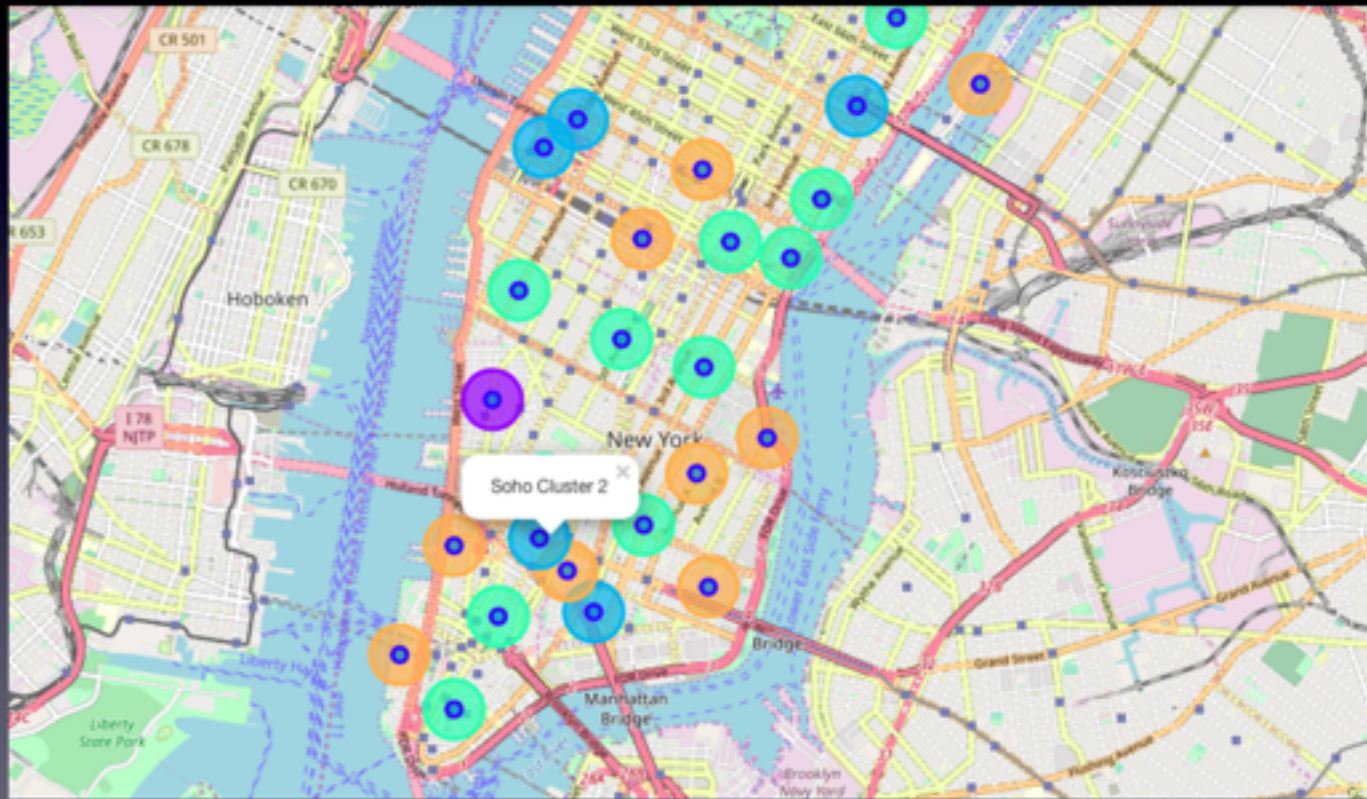

- 1.what is the cost of available rental places that meet the demands?
- 2.what is the cost of rent around a mile radius from each subway metro station?
- 3.what is the area of Manhattan with best rental pricing that meets criteria established?
- 4.What is the distance from work place ( Park Ave and 53 rd St) and the tentative future rental home?
- 5.What are the venues of the two best places to live? How the prices compare?
- 6.How venues distribute among Manhattan neighbourhoods and around metro stations?
- 7.Are there tradeoffs between size and price and location?
- 8.Any other interesting statistical data findings of the real estate and overall data.

### The Tools :-

web-scraping of sites is used to consolidate data -frame information which was saved as CSV files for convenience and to simplify the report . Geodata was obtained by using Nominatim to get latitude and longitude . Geopy\_distance and Nominatim were used to establish relative distances. Seaborn was used to visualise the data in the form of charts (bars,bubble,vertical) , folium used to display the maps

## Execution and Results :-

### Manhattan Map - Neighborhoods and Cluster of Venues

Apts for rent (blue) and subway stations (red)

# Selected Apartment!

The ONE consolidated map shows all information for decision:  
Apartments address, price, neighborhood, cluster of venues and subway station nearby.  
Blue dots=apts , Red dots=Subway station, Bubbles=Cluster of Venues

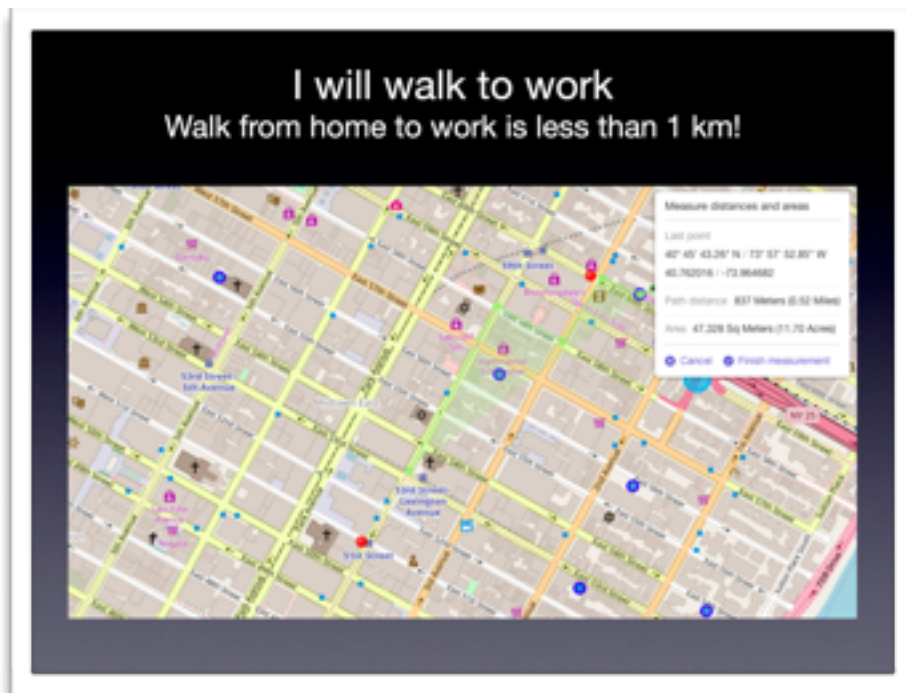

## Problem Resolution:-

After examining, I have chosen two locations that meet the requirements which will assess to make a choice.

Apartment 1: 305 East 63rd Street in the Sutton Place Neighbourhood and near 'subway 59th Street' station, Cluster # 2 Monthly rent : 7500 Dollars

Apartment 2: 19 Dutch Street in the Financial District Neighbourhood and near 'Fulton Street Subway' station, Cluster # 3 Monthly rent : 6935 Dollars

**Venus in Cluster 2 near future home**

```
// kk is the cluster number to explore
kk = 2
manhattan_merged.loc[manhattan_merged['Cluster Label'] == kk, manhattan_merged.columns[[1]] = List(range(5, manhattan_m
```

	Neighborhood	1st Most Common Venue	2nd Most Common Venue	3rd Most Common Venue	4th Most Common Venue	5th Most Common Venue	6th Most Common Venue	7th Most Common Venue	8th Most Common Venue	9th Most Common Venue	10th Most Common Venue
9	Marble Hill	Coffee Shop	Discount Store	Yoga Studio	Steakhouse	Supplement Shop	Tennis Stadium	Shoe Store	Gym	Bank	Seafood Restaurant
1	Chinatown	Chinese Restaurant	Cocktail Bar	Dim Sum Restaurant	American Restaurant	Vietnamese Restaurant	Salon / Barber Shop	Noodle House	Bakery	Bubble Tea Shop	Ice Cream Shop
6	Central Harlem	African Restaurant	Seafood Restaurant	French Restaurant	American Restaurant	Cosmetics Shop	Chinese Restaurant	Event Space	Liquor Store	Beer Bar	Gym / Fitness Center

34	Sutton Place	Gym / Fitness Center	Italian Restaurant	Furniture / Home Store	Indian Restaurant	Dessert Shop	American Restaurant	Bakery	Juice Bar	Boutique	Sushi Restaurant
36	Hudson Yards	Coffee Shop	Italian Restaurant	Hotel	Theater	American Restaurant	Cafe	Gym / Fitness Center	Thai Restaurant	Restaurant	Gym

## **DISCUSSION**

In general, I am positively impressed with the overall organisation, content and lab works presented during the Coursera IBM Certification Course. I feel this Capstone project presented me a great opportunity to practice and apply the Data Science tools and methodologies learned. I have created a good project that I can present as an example to show my potential. I feel I have acquired a good starting point to become a professional Data Scientist and I will continue exploring to creating examples of practical cases.

## **CONCLUSION**

The mapping with Folium is a very powerful technique to consolidate information and make the analysis and decision thoroughly and with confidence. I would recommend for use in similar situations.

With Foursquare, I was able to do a lot of analysis thanks to the available data. Thanks to the users of this service, it is really possible to generate interesting analyses and to expose them to offer other services.

**Here is the end of data analysis .please do-not hesitate to give feedback**
